
Map one decision

Start with a specific moment: approving an application, making a referral, or asking for more information.

Your process / team: _____

The decision

What needs to be decided? Where does this part of the process begin and end?

People

Who does the work? Who is affected? Who can resolve an exception?

Process

What happens today? Mark the handoffs, repeated work and moments of uncertainty.

Information

What facts are needed? Where do they come from? What is missing or sensitive?

Decisions

What follows an approved rule? Where could AI help? What must a person decide?

Use fictional examples or remove identifying details.

Sketch the evidence view

Draw what the person needs to see before deciding. A rough sketch is useful. Nobody is grading the drawing.

Your process / team: _____

Before any suggestion

Which facts, sources, conflicts and gaps should be visible first?

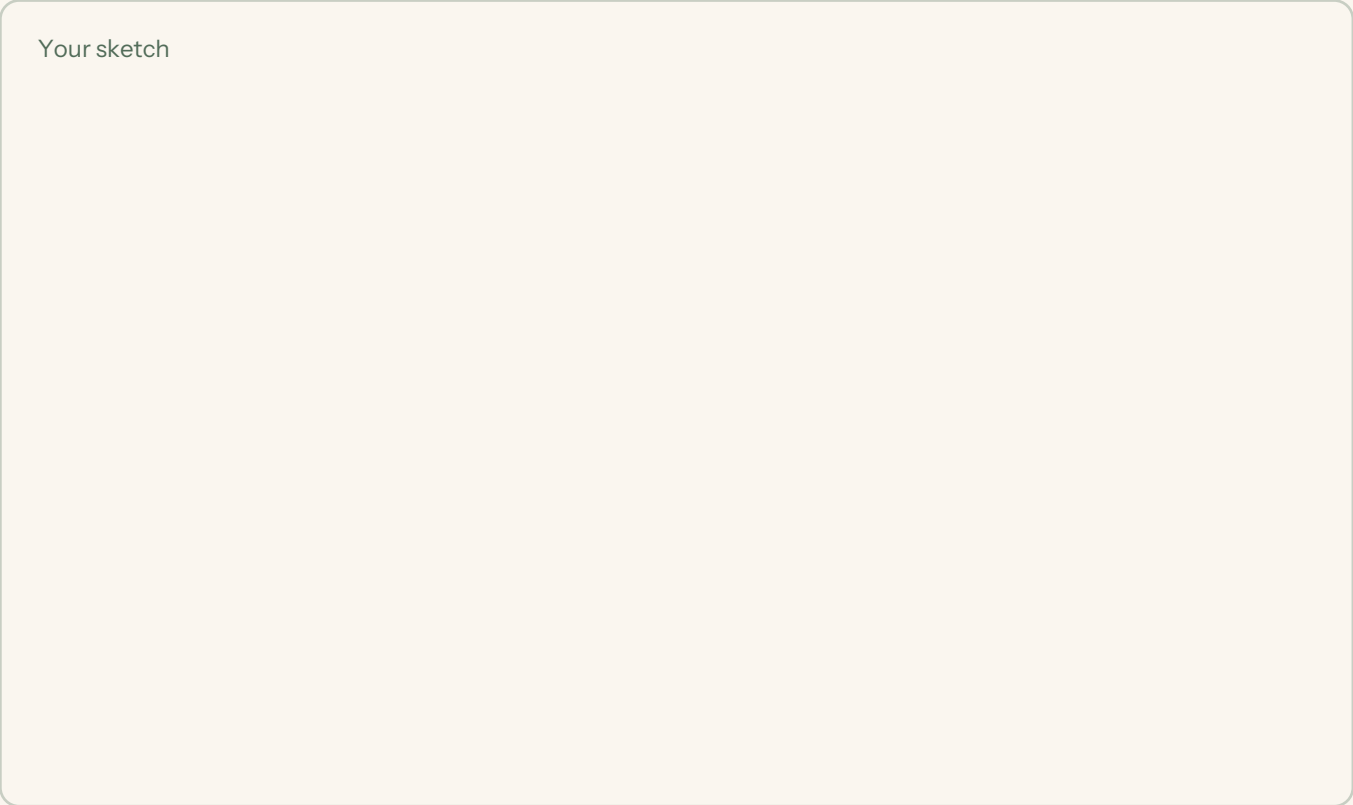

Make room for judgment

Where can the person record an initial view, ask for more information or disagree?

Correct and continue

How can they open a source, correct a fact and choose the next action?

Your sketch

Use fictional examples or remove identifying details.

Plan a small test

Try your sketch with the person who does the work. Start with three fictional cases: ordinary, conflicting evidence, and missing information.

Your process / team:

The test

What will you try? Who will take part, and when?

What to observe

Can the person find the relevant facts and spot a mistake? What takes effort?

When to pause

What would make you stop? Who can pause the test? How will the work continue manually?

What happened

What confused the reviewer? What did they change or ask for?

The next step

What will you change? Who owns that change, and when will you review it?

Use fictional examples or remove identifying details.
